Viirusetõrjeprogrammide seadistamine koostööks Merit Aktiva ja Merit Palgaga

Juuni 2010

Allolev info on mõeldud programmide Merit Aktiva ja Merit Palk kasutajatele.

Tänasel internetiajastul on aktuaalseks teemaks erinevad viirused ja muu nuhktarkvara. Viiruste vältimiseks on peaaegu igas arvutis olemas viirusetõrje programm. Kuna praktikas on vahetegemine kasuliku programmi (näiteks Merit Aktiva ja Merit Palk) ning ohtliku viiruse vahel on keeruline, põhjustavad viirusetõrjeprogrammid mõnikord tõrkeid selliste programmide töös, millel ei ole viirustega mingit pistmist.

Merit Aktivas ja Merit Palgas võivad tõrked avalduda näiteks niimoodi, et te ei saa teha programmi versiooniuuendust internetist või sisestada litsentsivõtit. Samamoodi võivad viirusetõrjeprogrammid põhjustada Aktiva ja Palga kasutamise ajal tehnilisi tõrkeid ja veateateid. Enamasti on veateadete põhjus selles, et viirusetõrjeprogramm on blokeerinud mõningate failide lugemise või neisse kirjutamise.

Õnneks on peaaegu igal viirusetõrjeprogrammil olemas seadistamise võimalused ("Erandite kaust"), mille abil saab viirusetõrjele "öelda", et Merit Aktiva ja Merit Palk on ohutud programmid.

Allpool on juhendid enamlevinud viirusetõrjeprogrammide seadistamiseks. Seadistamise ajal peaksid programmid Merit Aktiva ja Merit Palk olema suletud.

Klikkige enda arvutis oleva viirusetõrjeprogrammi nimel, et näha vastavat juhendit.

Bitdefender

Kui teie arvutis on viirusetõrje Bitdefender, siis on vaja teha nii:

- 1. Klikata hiire parema klahviga ekraani alumises paremas nurgas Bitdefenderi ikoonile.
- 2. Valida "Open Advanced Settings".
- 3. Vaikimisi on Antiviruse lehekülg aktiivne, sealt valida "Exceptions" ja siis klõpsata +-märgile.
- 4. Sealt valida "Choose a path not to be scanned" ja nüüd lisada Aktiva või Palga teekond.

Sellega on Bitdefenderi antiviiruse seadistamine lõppenud.

McAfee antiviirus

McAfee antiviirus programmi seadistamiseks tehke läbi tegevused, mis on alloleval ekraani pildil tähistatud numbritega 1-8.
